INSTALLATION of CABINET

1. Carefully remove all packing material. Place hardware packages, and shelves aside until needed.

2a. **Replacing an existing recessed bath cabinet.**
Remove existing cabinet from the wall. Measure the rough wall opening. The opening must be the size shown in (Table 1) above. If the opening is the proper size, the cabinet will easily fit between existing studs. Then, continue to Step 3. If the opening is too large, new framing may be required. If the opening is too small, the existing wall cut out may need to be enlarged. The services of a professional carpenter are highly recommended for any wall modifications.
NOTE: The rough wall opening must be free of all obstructions. If plumbing or electrical lines interfere with the wall opening, they must be relocated. This must be done in accordance with local and national codes preferably by a plumber and/or electrician.

2b. **Installing a recessed bath cabinet into new construction.**
Determine desired location of cabinet on wall. Mark wall to show wall opening size (see Table 1). Cut wall opening, being careful not to damage the surrounding wall surface. Insert framing to support all plaster board edges. NOTE: The services of a professional carpenter are highly recommended for any wall modifications. Wall studs, plumbing or electrical lines that interfere must be removed or relocated.
This must be done in accordance with local and national codes preferably by a plumber and/or electrician.

3. Prepare the mounting screws by placing the screws into the clear plastic bases. (Fig. 1)

4. Insert cabinet into wall opening. Note: For ease of installation, an additional person is recommended. Ensure the cabinet is plumb and level. If necessary use a carpenter's level and shim corners of cabinet. Secure to the wall studs through the four (4) mounting holes inside cabinet, using the screws that have been placed into the plastic bases. (Fig. 2)

****IMPORTANT**Do not over tighten the mounting screws as the body side wall may bend and prevent proper shelf installation. Only tighten the mounting screws until they are flush with the body.**

5. Snap the screw covers over the screw bases. (Fig. 3)

6. Carefully slide shelves into the cabinet body.
